

PRESS RELEASE

Product Partnership

The CMMS DIMO Maint connected to Microsoft Dynamics® NAV for accurate and efficient control of company assets.

Limonest, May 21, 2015 - DIMO Maint, a global provider of software solutions for maintenance management (CMMS) announces the release of a connector with Microsoft Dynamics® NAV, a Microsoft business solution, used by more than 100,000 customers in 42 countries to successfully manage their businesses.

DIMO Maint connected to Microsoft Dynamics NAV allows NAV users not only to access the key features of the CMMS (to manage equipment, operations, planning, resources, inventory and purchasing, budgets, etc.), but also:

- to have a **comprehensive view of their business by guaranteeing a single repository and compliance with procedures,**
- **to optimize the management of item repositories, inventory and suppliers,**
- **to avoid the risk of error** between the Microsoft Dynamics® NAV sales management and the CMMS,
- **apply the rules of sales management to the CMMS** at every step of the inventory and purchasing management process (e.g. replenishment point, order units, main supplier).

"With Microsoft Dynamics NAV, SMEs have a solution worthy of larger companies to **streamline their internal processes, speed up the development of their activities and achieve their business goals faster**", points out Wilfrid Guerit, director of the Microsoft Business Solutions division in France. "This partnership is in keeping with our **strategy of openness and integration of high-performance business solutions**. By connecting DIMO Maint, we are continuing to **enrich Microsoft Dynamics NAV** to provide a **customized solution tailored to the needs of SMEs** to allow them to **gain even more productivity**"

Integrating maintenance processes into Microsoft Dynamics® NAV ensures **better management of production assets and the sustainability of the company's holdings**. DIMO Maint's CMMS solution is a **decision-making tool** that makes it possible to:

- optimize the **availability and performance of equipment** and infrastructure
- **measure and optimize the cost of ownership of assets** and the company's holdings
- **control maintenance costs** associated with reducing inventory, by ensuring better monitoring of subcontracting
- **optimize technical and human resources** related to maintenance via resource planning and monitoring
- **make equipment reliable** with better traceability of interventions
- **facilitate decision making** for the management and renewal of equipment, using the technical and financial indicators: intervention analysis, default rates, cost dashboard, ABC equipment list, turnover, etc.

This partnership fully meets with current challenges facing companies in terms of seeking productivity gains, competitiveness and service improvements.

Jean Paul Genoux, Managing Director of DIMO Software, says: "This partnership will provide **the global market with a CMMS solution connected to Microsoft Dynamics® NAV**. This solution developed on the basis of skills, expertise and shared values will enable us to expand our vision and our response around issues related to **controlling costs** and **streamlining maintenance processes**. In times of crisis, as organizations need to be more responsive, companies are looking for **simple solutions** with **a return on investment that is quickly measurable**".

About DIMO Maint
